

# **Unit 3**

## Measurement of Area & Volume

# Measurement of area

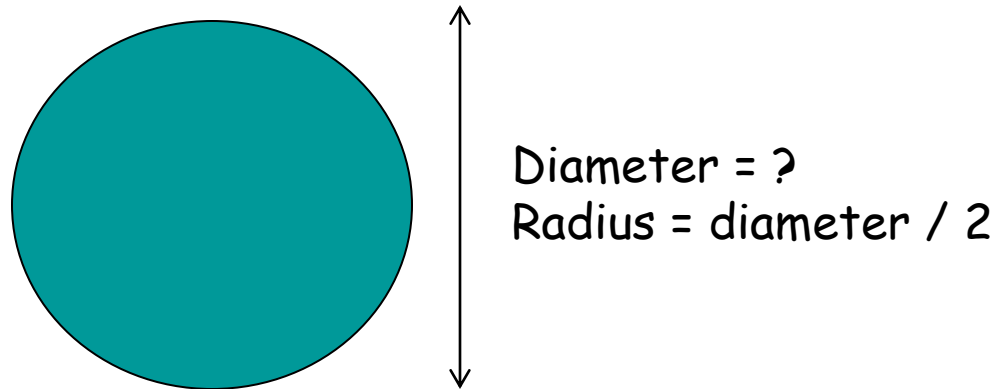

SI unit for area:  $m^2$

- There are two kinds of figures:
  - regular figures
  - irregular figures

# Regular figures

- For regular figures, we must first obtain the formula for the calculation of the area. (e.g.  $\pi r^2$ )
- Next, we measure the physical quantity (e.g. length) required to calculate the area.
- Finally we perform the calculation.

# Some examples of regular figures

SQUARE

Formula for area = length<sup>2</sup> ( $l^2$ )

# Some examples of regular figures

## RECTANGLE

Formula for area = length x breadth ( $l \times b$ )

# Some examples of regular figures

## PARALLELOGRAM

Formula for area = base x height (bxh)

# Some examples of regular figures

## TRAPEZIUM

Formula for area =  $\frac{1}{2}$  x sum of parallel sides x height  
=  $\frac{1}{2}(a+b)h$

# Some examples of regular figures

## TRIANGLE

Formula for area

$$= \frac{1}{2} \times \text{base} \times \text{height} \left( \frac{1}{2}bh \right)$$

# Some examples of regular figures

## CIRCLE

Formula for area =  $\pi \times \text{radius}^2$  (  $\pi r^2$  )

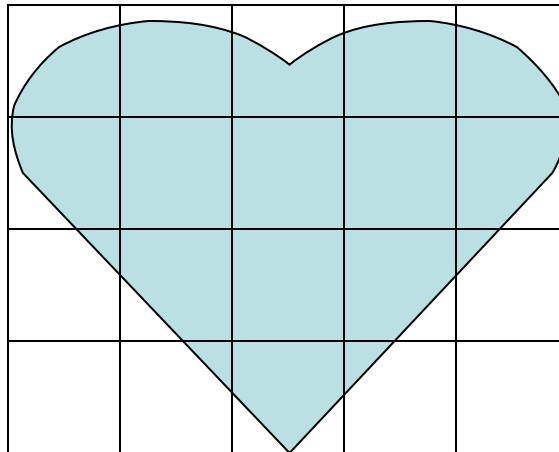

# Example

- How do you calculate the **cross-sectional area** of a piece of wire?

- For an irregular figure:
- Step 1:  
Draw a square grid over the figure (or trace the figure over a square grid depending on which is possible.)

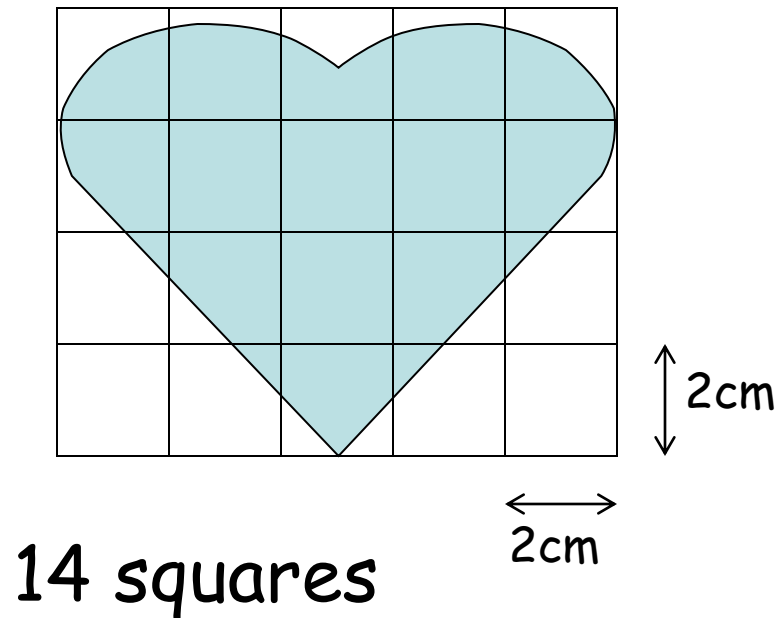

- For an irregular figure:
- Step 2:  
Count the number of squares that are at least half-covered by the figure.

14 squares

- For an irregular figure:
- Step 3:  
Calculate the area of one square

**Area of 1 square = 4 cm<sup>2</sup>**

- For an irregular figure:
- Step 4:

Multiply the area of 1 square and the number of filled-squares to get the area of the figure.

$$4 \text{ cm}^2 \times 14 \text{ squares} = 56 \text{ cm}^2$$

14 squares  $\longleftrightarrow$  2cm

- IQ Test

How do you get a more accurate calculation of the irregular figure?

Ans: Use a grid of smaller squares!

- **ACTIVITY NO 5**

# Unit Conversion for AREA

- $1 \text{ cm}^2 = \underline{\hspace{2cm}} \text{ m}^2$   
 $1 \text{ cm}^2 = 1 \text{ cm} \times 1 \text{ cm}$   
 $= 0.01 \text{ m} \times 0.01 \text{ m}$   
 $= 0.0001 \text{ m}^2$

# Unit Conversion for AREA

- $20 \text{ m}^2 = \underline{\hspace{2cm}} \text{ cm}^2$   
 $20 \text{ m}^2 = 20 \text{ m} \times 1 \text{ m}$   
 $= 2000 \text{ cm} \times 100 \text{ cm}$   
 $= 200000 \text{ cm}^2$

# Unit Conversion for AREA

- $0.05 \text{ km}^2 = \underline{\hspace{2cm}} \text{ m}^2$   
 $0.05 \text{ km}^2 = 0.05 \text{ km} \times 1 \text{ km}$   
 $= 50 \text{ m} \times 1000 \text{ m}$   
 $= 50000 \text{ m}^2$

# Try this Yourself!

Complete the following conversion of units.

$$1 \text{ cm}^2 = 1 \text{ cm} \times 1 \text{ cm} = \underline{\hspace{2cm}} \text{ m} \times \underline{\hspace{2cm}} \text{ m}$$
$$= \underline{\hspace{2cm}} \text{ m}^2$$

$$4.9 \text{ km}^2 = \underline{\hspace{2cm}} \text{ km} \times \underline{\hspace{2cm}} \text{ km} = \underline{\hspace{2cm}} \text{ m} \times \underline{\hspace{2cm}} \text{ m}$$
$$= \underline{\hspace{2cm}} \text{ m}^2$$

# Measurement of Volume

# Volume of objects

SI unit for volume:  $\text{m}^3$

- Two kinds of objects where we can measure the volume
  - Regular shaped objects
  - Irregular shaped objects

# Regular shaped objects

## CUBE

$$\text{Volume} = \text{length}^3 (l^3)$$

length

## CUBOID

$$\text{Volume} = \text{length} \times \text{breadth} \times \text{height} (l \times b \times h)$$

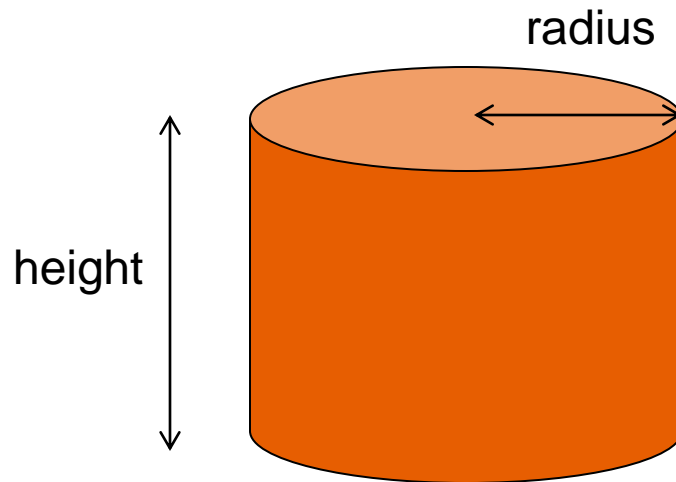

length

# Regular shaped objects

## CYLINDER

Volume = area of circular base x height  
=  $\pi \times \text{radius}^2 \times \text{height}$  ( $\pi r^2 h$ )

# Regular shaped objects

## SPHERE

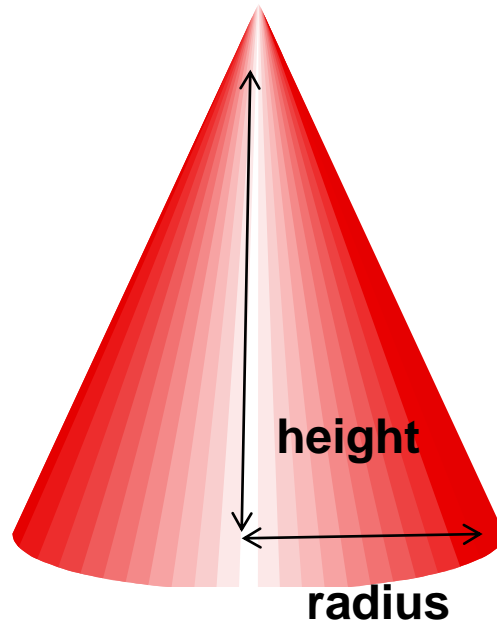

$$\text{Volume} = \frac{4}{3} \pi \times \text{radius}^3 = \frac{4}{3} \pi r^3$$

# Regular shaped objects

## CONE

Volume =  $\frac{1}{3} \pi \times \text{radius}^2 \times \text{height} = \frac{1}{3} \pi r^2 h$

# Examples

- Find the volume of a cube with length 2cm.

Ans:

$$\begin{aligned}\text{Volume} &= l^3 \\ &= 2^3 \\ &= 8 \text{ cm}^3\end{aligned}$$

# Examples

- Find the volume of a cuboid with length 2cm, width 3cm and height 2cm.

Ans:

$$\begin{aligned}\text{Volume} &= l \times w \times h \\ &= 2 \times 3 \times 2 \\ &= 12 \text{ cm}^3\end{aligned}$$

# Examples

- Find the volume of a cylinder if the radius of its base is 3cm and height is 5cm.

Ans:

$$\begin{aligned}\text{Volume} &= \pi \times r \times r \times h \\ &= \pi \times 3 \times 3 \times 5 \\ &= 141.4 \text{ cm}^3\end{aligned}$$

# Examples

- Find the volume of a sphere if its diameter is 4cm.

Ans:

$$\text{Radius} = 2 \text{ cm}$$

$$\text{Volume} = \frac{4}{3} \times \pi \times r^3$$

$$= \frac{4}{3} \times \pi \times 2^3$$

$$= 33.5 \text{ cm}^3$$

# Examples

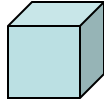

- Find the volume of a cone which has a height of 5cm and the radius of its base is 4cm.

Ans:

$$\begin{aligned}\text{Volume} &= \frac{1}{3} \times \pi \times r^2 \times h \\ &= \frac{1}{3} \times \pi \times 4^2 \times 5 \\ &= 83.8 \text{ cm}^3\end{aligned}$$

# Volume of regular figures

Types of shape	Formula for volume
Cube 	$V = l^3$
Cylinder 	$V = \pi r^2 h$
Cuboid 	$V = l b h$
Sphere 	$V = \frac{4}{3} \pi r^3$
Cone 	$V = \frac{1}{3} \pi r^2 h$

# Irregular objects

- Two kinds of irregular objects
  - Liquids
  - Irregular solids

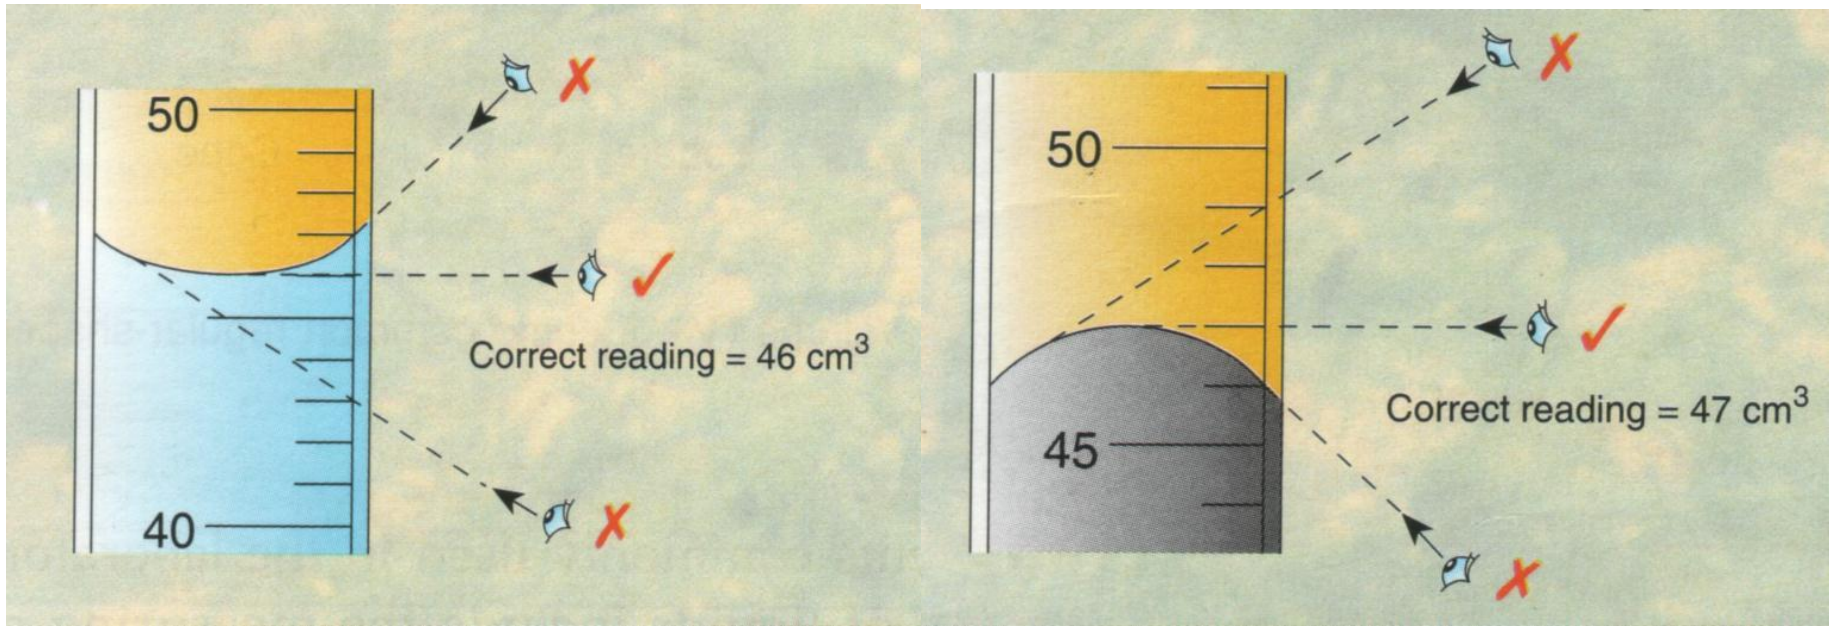

# Volume of liquids

- Volume of liquids
  - Some common laboratory instruments used:
    - Measuring cylinder  
(accuracy =  $1 \text{ cm}^3$ )  
Eg.  $18.0 \text{ cm}^3$ ,  $18.5 \text{ cm}^3$
    - Burette  
(accuracy =  $0.1 \text{ cm}^3$ )  
Eg.  $0.20 \text{ cm}^3$ ,  $0.25 \text{ cm}^3$

# Measuring volume of liquids

- Precautions:
  - Parallax error - place eye at level of meniscus while taking reading.
  - Meniscus reading - read the bottom of the meniscus (or top, depending on the liquid)

# Measuring the volume of liquid using measuring cylinder

Pour the liquid into the measuring cylinder and read the reading directly from the scale.

Precautions:

- Position the eye at the same level as the meniscus to avoid parallax error.
- Place the measuring cylinder on a flat and horizontal surface.

# Irregular solid objects

- Volume of irregular solids
  - Displacement method
    - Using **measuring cylinder** (for small objects)
    - Using **displacement can** (for large objects)

Volume of object  
is given by  
 $V = V_2 - V_1$

# Volume of irregular solids

## Displacement method

- Using **displacement can** (for large objects)
  - **Step 1**: Fill the displacement can until excess water flows out of the spout.
  - **Step 2**: Lower the irregular object with a string into the can
  - **Step 3**: Collect and measure the displaced water with a measuring cylinder

# Think about it...

- How would you measure the volume of
  - A lump of plasticine?
  - A piece of cork?using the displacement method?

# Volume of a floating object

Measurement of volume of a small irregular-shaped object which does not sink in water:

$$V_2 = 58 \text{ cm}^3$$

$$V_1 = 36 \text{ cm}^3$$

$$\text{Volume of cork} = 22 \text{ cm}^3$$

# Unit conversion for volume

- $1 \text{ cm}^3 = 1 \text{ ml} = 0.001 \text{ litre (l)}$
- $1 \text{ cm}^3 = 1 \text{ cm} \times 1 \text{ cm} \times 1 \text{ cm}$   
 $= 0.01 \text{ m} \times 0.01 \text{ m} \times 0.01 \text{ m}$   
 $= 0.000001 \text{ m}^3$
- $1 \text{ litre} = 1000 \text{ cm}^3 = 0.001 \text{ m}^3$

# Unit conversion for volume

- $0.02 \text{ m}^3 = ? \text{ cm}^3$

Ans:

$$\begin{aligned} 0.02 \text{ m}^3 &= 0.02 \text{ m} \times 1 \text{ m} \times 1 \text{ m} \\ &= 2 \text{ cm} \times 100 \text{ cm} \times 100 \text{ cm} \\ &= 20000 \text{ cm}^3 \end{aligned}$$

# Unit conversion for volume

- $2 \text{ m}^3 = ? \text{ litre}$

Ans:

$$\begin{aligned} 2 \text{ m}^3 &= 2 \text{ m} \times 1 \text{ m} \times 1 \text{ m} \\ &= 200 \text{ cm} \times 100 \text{ cm} \times 100 \text{ cm} \\ &= 2000000 \text{ cm}^3 \\ &= 2000000 \text{ ml} \\ &= 2000 \text{ l} \end{aligned}$$

# Try this Yourself!

Complete the following table:

$1 \text{ m}^3 =$	litres
$1 \text{ km}^2 =$	$\text{m}^2$
$1 \text{ dm} =$	cm
$1 \text{ litre} =$	$\text{cm}^3$
